## SUMMARY

Cybersecurity and IT professional pursuing an M.S. in Digital Forensics and Cybersecurity.
Experience in identity support, endpoint troubleshooting, security monitoring labs, and Python projects.

## EDUCATION

M.S., Digital Forensics and Cybersecurity | John Jay College | Expected May 2028
B.S., Computer Science and Information Security | John Jay College | September 2025

## CERTIFICATIONS

CompTIA A+ | AWS Certified Cloud Practitioner | Google IT Support Professional
CompTIA Security+ - In progress

## TECHNICAL SKILLS

Python, C++, JavaScript, Bash, PowerShell, SQL | Windows, Kali Linux, macOS
Active Directory, Duo MFA, Microsoft 365, ServiceNow, Track It!, Splunk, Wireshark,
AWS, Azure, GitHub, VMware, Power BI, Power Automate, Nmap, Snort

## EXPERIENCE

IT Support Assistant | CUNY John Jay College | New York, NY | Feb 2025 - Present
- Support university technology services and identity-related requests for 15,000+ users.
- Manage Active Directory account changes and Duo MFA troubleshooting.
- Investigate reported phishing or unusual account activity; resolve hardware, software, and connectivity incidents using ticketing and remote-support tools.

IT Analyst Intern | Rose Associates | New York, NY | Jul 2024 - Aug 2024
- Built Power BI dashboards using SharePoint and Box data.
- Automated technical audit and data-collection workflows with Power Automate.
- Provisioned and re-imaged enterprise devices and supported SharePoint permissions.

IT Intern | Concern Worldwide US | New York, NY | Jun 2023 - Aug 2023
- Supported employees with hardware, software, and access issues in a hybrid environment.
- Developed barcode-based asset tracking, improving inventory accountability.
- Supported SharePoint file organization and role-based access.

## SELECTED PROJECTS

Splunk Malware Investigation | CodePath
- Correlated simulated web, authentication, and upload events using SPL to investigate suspicious server activity and document malware indicators.

Network DoS Mitigation | CodePath
- Compared protected and unprotected Slowloris traffic and analyzed TCP sessions in Wireshark after implementing nginx mitigation rules.

AI-Powered Phishing Detection | Python
- Developed a phishing classification prototype using TF-IDF, sentiment analysis, URL heuristics, and text extraction.

Forensic Recovery and Timeline Reconstruction | Python
- Built a workflow for file carving, metadata extraction, SHA-256 verification, and structured forensic timeline reporting.
